

Finland has joined ESA's ScyLight Programme (Secure and Laser communication technology) at the end of last year. The Finnish delegation encourages relevant Finnish companies to familiarize themselves with this programme and especially to be prepared to give feedback on their industrial interests and expectations when the preparation work for ESA Ministerial Meeting CM25 intensifies later this year.

Scylight supports the research, development and evolution of optical communication – laser – technologies, and provides flight opportunities for their in-orbit verification.

ESA organises the [7th Annual ScyLight Conference](#) and 2nd Quantum Workshop on the 12 - 14 June 2024 in Eindhoven The Netherlands
