Target: Digitalisation for Commercial Space solutions

Long background – 2017/18 large companies and Eurospace hoped for 2 billion euro partnership. Now, it is **100 M€ in 3 years**.

For launchers Commissioner Breton signaled in January "flagship size" funding after 2027. Satellite technologies will follow – or not.

## Research and innovation action (RIA)

Activities to establish new knowledge or to explore the feasibility of a new or improved technology, product, process, service or solution.

This may include basic and applied research, technology development and integration, testing, demonstration and validation of a small-scale prototype in a laboratory or simulated environment.

## Innovation action (IA)

Activities to produce plans and arrangements or designs for new, altered or improved products, processes or services.

These activities may include prototyping, testing, demonstrating, piloting, large-scale product validation and market replication.

### EXCELLENCE

- ✓ Clarity and pertinence of the **project's objectives**, and the extent to which the proposed work is ambitious, and goes beyond the state-of-the-art.
- ✓ Soundness of the proposed **methodology**, including the underlying concepts, models, assumptions, interdisciplinary approaches, appropriate consideration of the **gender dimension** in research and innovation content, and the quality of **open science practices** including sharing and management of research outputs and engagement of citizens, civil society and end users where appropriate.

### IMPACT

- ✓ Credibility of the **pathways** to achieve the expected **outcomes and impacts** specified in the work programme, and the likely scale and significance of the contributions due to the project.
- ✓ Suitability and quality of the **measures to maximize expected outcomes and impacts**, as set out in the dissemination and exploitation plan, including communication activities.

### QUALITY AND EFFICIENCY OF THE IMPLEMENTATION

- ✓ Quality and effectiveness of the **work plan**, assessment of risks, and appropriateness of the effort assigned to work packages, and the resources overall.
- ✓ Capacity and role of each **participant**, and extent to which the **consortium** as a whole brings together the necessary expertise.

# Technology Readiness Level Defines Which Action Suits Your R&D Phase

TRL 1 – basic principles observed  
TRL 2 – technology concept formulated  
TRL 3 – experimental proof of concept

**TRL 4** – technology validated in lab

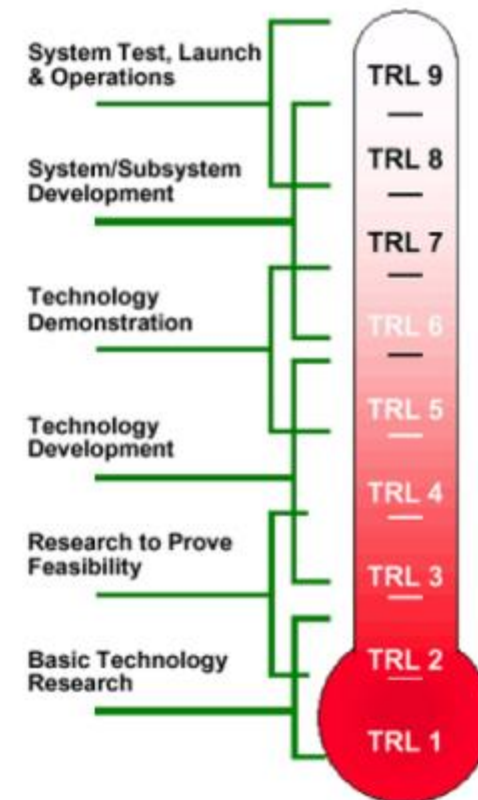

**TRL 5** – technology validated in relevant environment (industrially relevant environment in the case of key enabling technologies)

**TRL 6** – technology demonstrated in relevant environment (industrially relevant environment in the case of key enabling technologies) ~"MVP"

**TRL 7** – system prototype demonstration in operational environment ~"Pilot"

**TRL 8** – system complete and qualified ~"Large-scale pilot"

TRL 9 – actual system proven in operational environment (competitive manufacturing in the case of key enabling technologies; or in space)

Teknologian valmiustaso – NASA loi mittarin avaruuslentojen alkuaikoina. EU:ssa tutkimushanke (RIA) on tasolla 3-6, markkinaläheisempi IA-hanke TRL on korkeampi, joskus 8 asti. Markkinaläheisiä rahoitetaan 70% tasolla (julkinen sektoria saa aina 100%), RIA 100%. 100% on osuus suorista kuluista, päälle 25% indirect costs (overhead). CL3-hauissa pyritään välillä TRL-tasolle 8 ... RIA-projektissa.
